AI PDF RAG Chatbot - Test Document

This is a simple PDF created for testing a FastAPI upload endpoint and text extraction with PyMuPDF.

Project summary: The application allows users to upload PDF documents and ask questions about their content using Retrieval-Augmented Generation.

Important details: The backend is built with FastAPI. The PDF text is extracted, split into chunks, embedded, stored in a vector database, and used later for answering questions.

Sample fact for testing: The chatbot should answer only from the uploaded PDF and should include sources when possible.
